- **Epithelial Cells:** Cover body surfaces and line internal organs, providing protection and absorption.
- **Connective Tissue Cells:** Provide support and structure (e.g., fibroblasts, adipocytes).

Structural Features of Different Cell Types

Each cell type has unique structural features tailored to its function:

- **Skeletal Muscle Cells:** Long, multinucleated fibers with striations for contraction.
- **Neurons:** Dendrites and axons for transmitting signals, with specialized synaptic terminals.
- **Red Blood Cells:** Biconcave shape, no nucleus, optimized for oxygen transport.
- **Epithelial Cells:** Tight junctions, microvilli for absorption, and a protective layer.
- **Adipocytes:** Large lipid droplet for fat storage, minimal cytoplasm.

Functions of Different Cell Types

Understanding the functions helps clarify why cells have specific structures:

- Muscle cells generate force for movement.
