Step-by-Step Solutions from the Answer Key

Sample Question 1: Identifying Elements

Question:

Based on the alien periodic table, which element corresponds to symbol "Xz"? It has an atomic number of 12 and is classified as a metal.

Answer:

- Step 1: Locate the symbol "Xz" on the alien periodic table.
- Step 2: Confirm the atomic number 12; this matches the element magnesium (Mg) in the standard periodic table.
- Step 3: Since it's classified as a metal, and the atomic number matches magnesium, the alien element "Xz" is analogous to magnesium.
- Conclusion: The element "Xz" is the alien equivalent of magnesium.

Sample Question 2: Analyzing Periodic Trends

Question:

How does the atomic radius change for the alien elements from left to right across a period? Use the answer key to justify your response.

Answer:

- Observation: The answer key shows that as you move from left to right across a period on the alien periodic table, the atomic radius decreases.
- Explanation: This pattern aligns with the standard periodic trend because additional protons in the nucleus increase the electrostatic pull on electrons, pulling the electron cloud closer to the nucleus.
- Implication: Understanding this trend helps in predicting the physical and chemical properties of the alien elements, reinforcing the concept of periodicity.

Sample Question 3: Group and Period Identification

Question:

Identify the group and period of the alien element "Zy" with atomic number 35.

Answer:

- Step 1: Find "Zy" on the alien periodic table.
- Step 2: Note its position; the answer key indicates it is in the third column from the left and the fifth row from the top.
- Step 3: Based on this position, "Zy" is in group 3 and period 5.
- Conclusion: The element "Zy" is in group 3, period 5.
